

Introduction to Salesforce

Salesforce is a cloud-based Customer Relationship Management (CRM) platform that allows users to develop applications and manage data online without installing any software. It provides a low-code environment where users can create custom applications using features like objects, fields, tabs, and apps. Salesforce helps organizations store, manage, and analyse data efficiently.

Custom Application in Salesforce

A custom application in Salesforce is a collection of tabs, objects, and features designed for a specific purpose. It allows users to organize their work and access related data easily. Using App Manager, developers can create Lightning apps that include required objects and functionalities for business processes.

Custom Objects and Fields

A custom object in Salesforce is similar to a database table that stores data specific to an organization. Each object contains fields which represent individual data items. Different types of fields such as text, email, phone, date, and picklist are used to capture various kinds of information. In this project, the “Complaint” object is used to store complaint details.

Page Layout

Page layout is used to control how fields and information are displayed on the screen. It helps in organizing fields into sections, making the interface user-friendly and easy to understand. A well-designed page layout improves data entry and readability.

Complaint Management System

A Complaint Management System is used to record, track, and manage customer complaints. It helps organizations handle customer issues in a structured way. By storing complaint details such as customer name, complaint type, priority, and status, the system ensures proper tracking and resolution of issues.

Working of the System

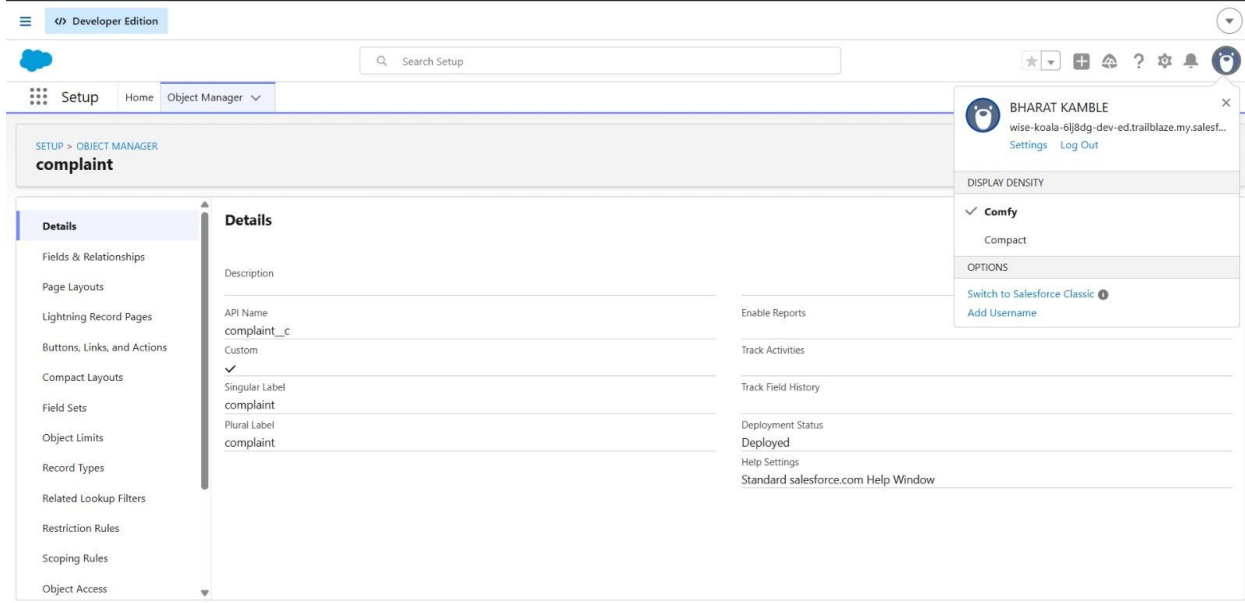

In this practical, a custom object named “Complaint” is created. Various fields are added to store information about complaints. A page layout is designed to arrange the fields properly. A Lightning App is created to manage complaint records. Users can add, view, and manage complaints easily through the application.

Advantages of the System

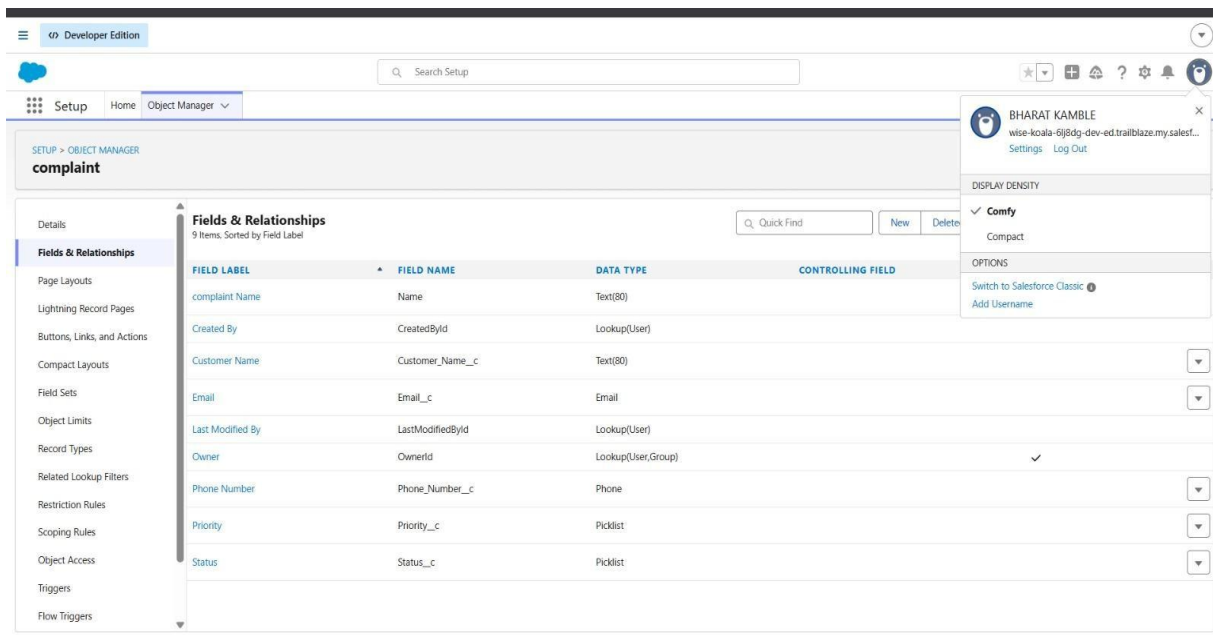

- Easy to store and manage complaint data
- Improves organization of information
- User-friendly interface
- Reduces manual work
- Helps in quick tracking of complaints

Complaint Management System using Salesforce

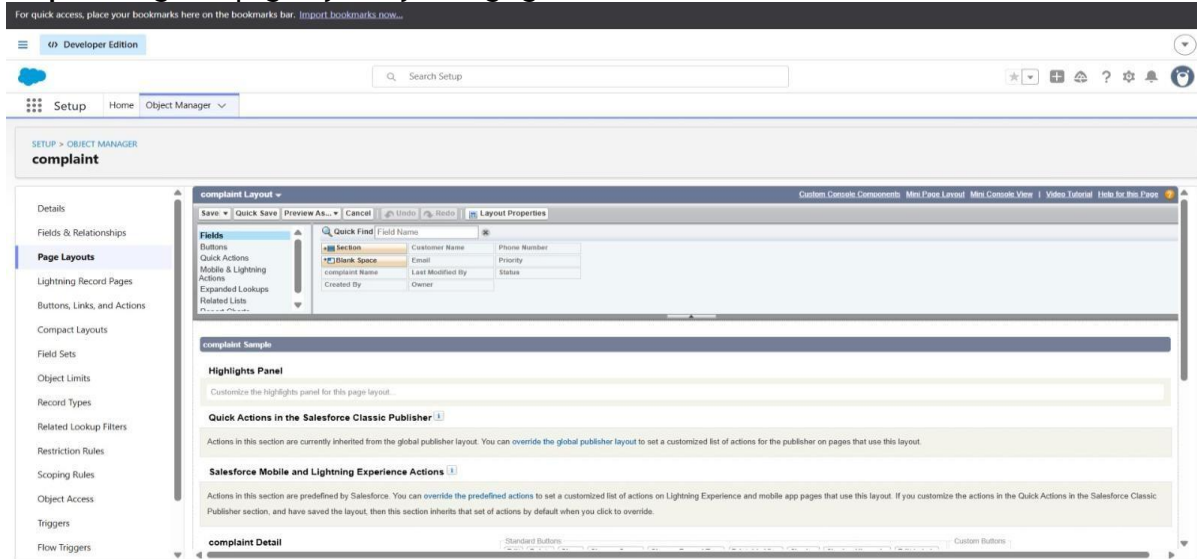

Step 1: Open Salesforce Setup and go to Object Manager. Create and open the “Complaint” custom object.

Step 2: Add custom fields such as Customer Name, Email, Phone Number, Complaint Type, Priority, Status, etc.

Step 3: Design the page layout by arranging fields into sections for better user interface.

Step 4: Open App Manager and create a new Lightning App for managing complaints.
